Split Face Face shown in Arctic White

SPLIT FACE masonry units are a popular architectural finish as they offer a uniquely textured face where no two units are alike. This provides aesthetic depth to building design.

Our “premium” colors include more specialty aggregates, utilize bolder pigments and are typically made with white cement. You will find these same colors represented throughout all of our finishes.

Our “standard” colors feature a simplified mix design, which provides a more economical solution for your projects.

To view Split Face shapes and sizes, please turn to page 53.

Due to the nature of natural aggregates, some variation is to be expected in color and texture. We recommend erecting a jobsite sample panel to show color and texture.
